

Are Your Records Slowing Down Justice?

Digitech Systems helps law enforcement agencies securely manage data and speed up case processing.

Criminal justice agencies, from local police to state courts, process vast amounts of data daily, including arrest reports, warrants, and case files. Yet many still rely on paper-based workflows and disconnected systems that delay investigations and slow legal responses. With nearly 20,000 US law enforcement agencies, each using separate databases, siloed information can lead to serious public safety risks.

How do Sys.tm® and the PaperVision® product suite help with criminal justice?

- Improve efficiency with electronic records.
- Seamlessly integrate systems for better communication across the justice process.
- Gain control of compliance and security.
- Cut costs and reduce reliance on paper.

Accelerate justice with secure, integrated records:

Digitech Systems technology offers real-time information access, automated workflows, and cloud-based tools that make it easy to manage police and court records, without costly infrastructure changes. Criminal justice teams get faster, more reliable access to the data they need, when they need it.

“In 2025, artificial intelligence (AI) is reshaping the backbone of law enforcement operations—records management. Once dominated by manual data entry, siloed systems, and time-consuming report writing, the field is now undergoing a digital transformation driven by cloud-native platforms, predictive analytics, and intelligent automation.¹”

Bring Speed and Security to Criminal Justice

Still relying on paper files or fragmented databases? With Digitech Systems technology, you can manage law enforcement, legal, and court records electronically, while securely sharing data across agencies. The result? A more efficient and responsive justice system.

Speed Justice Processes

Sys.tm® and PaperVision® eliminate process delays by securing records, connecting applications, and automating document workflows. Full-text search allows you to locate case files, warrants, or court documents in seconds.

Integrate Seamlessly with Other Systems

Tired of siloed systems that don't communicate? Digitech Systems technology integrates effortlessly with law enforcement, legal, and court records systems enabling faster suspect processing, and speedier justice by reducing the risk of lost information. Police, courts, and legal teams stay connected and informed.

Gain Control of Security and Compliance

Many criminal justice teams inadvertently place sensitive information at risk. With advanced security features like audit trails, role-based access, encryption, multi-factor authentication and redaction, Sys.tm and PaperVision ensure your agency meets the FBI's Criminal Justice Information Security (CJIS) Security Policy and e-discovery requirements. Keep sensitive data safe and track every interaction for litigation readiness.

Cut Costs Through Safe, Effective Artificial Intelligence (AI)

Criminal Justice teams may be missing out on the benefits of AI because they are concerned about introducing bias or security loopholes. With Sys.tm, you can integrate AI to quickly and effectively identify document types, to extract important information to eliminate manual typing, and to automatically summarize or outline longer records using Generative AI (GenAI) tools seamlessly within document workflows. Sys.tm® Intelligence offers low risk—big reward benefits for justice.

“PaperVision® Enterprise saves the Baton Rouge City Police \$25,000 annually by improving efficiency and eliminating lost revenue. “All technical problems disappeared! The Digitech Systems software... does what you want it to do, when you want it to do it.”

— Records Administrator, City of Baton Rouge Police Department
